

HYVOLUTION PARIS 2026

The global hydrogen meeting point celebrates 10 years and enters a new industrial phase

From 27 to 29 January 2026, Hyvolution Paris will hold its 10th anniversary edition at Paris Expo Porte de Versailles (Hall 1).

Organised in collaboration with France Hydrogène, Hyvolution has become the leading global meeting point for the hydrogen ecosystem, at a time when the sector is moving from pilot projects to large-scale industrial deployment.

From a pioneering event to a global platform

Over the past decade, Hyvolution has grown alongside the hydrogen industry.

The number of exhibitors has increased tenfold, from around 40 in 2016 to nearly 400 exhibitors and brands expected in 2026, reflecting the rapid structuring of the global market.

Today, Hyvolution Paris is no longer a national event with an international outlook, but a true global hub, bringing together stakeholders from across the entire hydrogen value chain.

- **40% international exhibitors**
- **65 countries represented**
- **12 international pavilions**

“Hyvolution Paris is no longer a French event with an international dimension. It has become a global meeting point, at the crossroads of North–South flows,”

Raphaël Goerens, Director of Hyvolution

Paris at the heart of the global hydrogen ecosystem

Anchored in Paris, Hyvolution benefits from Europe’s strategic position within global hydrogen dynamics, connecting Europe, Africa, the Middle East and Latin America.

This international reach is reinforced by the expansion of the Hyvolution network, with editions launched in Chile and Canada, and a new edition in Brazil in 2026, alongside further international developments underway.

A business-driven event for a maturing market

As the hydrogen sector enters a phase of consolidation and industrial scale-up, Hyvolution plays a key role as a **business and partnership accelerator**.

- **More than 20,000 connections** between participants in 2025

PRESS RELEASE

- **Over 1,000 business meetings already scheduled** ahead of the 2026 edition

Hyvolution brings together producers, industrial off-takers, infrastructure developers, investors and public stakeholders, facilitating long-term contracts, financing discussions and international cooperation.

Editorial content focused on real-world challenges

For its anniversary edition, Hyvolution offers a high-level editorial programme designed around the concrete questions currently facing the hydrogen industry: market access, competitiveness, financing, regulation and certification.

Key features include:

- A **Mainstage** dedicated to strategic discussions across the value chain
- **60 operational workshops** focused on real projects and concrete solutions
- The **International H₂ Associations Hub**, bringing together **15 national and international hydrogen associations**
- A dedicated space for **natural hydrogen**, reflecting emerging global interest

A pragmatic vision for the decade ahead

Hyvolution 2026 reflects a pragmatic vision of hydrogen's role by 2030–2035: not as a universal solution, but as a key industrial lever for specific uses such as heavy industry, synthetic fuels, aviation, maritime transport and long-duration energy storage.

This strategic perspective will also be highlighted through the contribution of France Hydrogène. Its new President, Nicolas Brahy, recently shared his vision of hydrogen as a driver of decarbonisation, energy sovereignty and reindustrialisation.
